HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in telephone interviews with Jason Womer on May 14 and 19, 2009.

2. The application has been amended as follows:

In the Claims:

Claims 1, 5, 7-9, 16, 18-20, 23-27 and 32 are amended to read as follows and previously withdrawn claims 28-31 are canceled:

In claim 1, lines 7-11 shall read:

contacting the palladium ions and the nucleic acid molecule under conditions effective to bind the palladium ions on one or more sites of the nucleic acid molecule; wherein the palladium ions strongly associate with the nucleic acid molecule to prevent general and spontaneous deposition of the palladium ions; and

In claim 5, line 1, replace --wherein said contacting-- with --wherein contacting--.

In claim 7, line 1, replace --wherein said contacting-- with --wherein contacting--.

In claim 8, lines 2-3, replace --prior to said contacting-- with --prior to contacting--.

In claim 9, line 3, replace --presence of a target nucleic acid molecule-- with --presence of the target nucleic acid molecule--.

Also in claim 9, lines 18-23 shall read:

contacting the palladium ions with the device after said contacting the probes with the sample under conditions effective to bind the palladium ions on one or more sites of any of the complex of the target nucleic acid molecules hybridized to the probes; wherein the palladium ions more strongly associate with the target nucleic acid molecule than with the electrical conductors, preventing general and spontaneous deposition of the palladium ions;

In claim 16, line 1, replace --wherein said contacting-- with --wherein contacting--.

In claim 18, line 1, replace --wherein said contacting-- with --wherein contacting--.

In claim 19, line 2, replace --prior to said contacting-- with --prior to contacting--.

In claim 20, line 2, replace --from the genetic material-- with --from genetic material--.

In claim 23, line 2, replace --from the genetic material-- with --from genetic material--.

In claim 24, line 2, replace --from the genetic material-- with --from genetic material--.

Claim 25 shall read:

The method according to claim 9, wherein one or both of the probes has a sequence which is complementary to a sequence having a polymorphism, wherein at least one base complementary to the polymorphism is located at an end of the probe distal to the conductors.

In claim 26, lines 7-11 shall read:

contacting the stannous ions and the nucleic acid molecule under conditions effective to bind stannous ions on one or more sites of the nucleic acid molecule;

wherein the stannous ions strongly associate with the nucleic acid molecule preventing general and spontaneous deposition of the stannous ions; and

In claim 27, line 3, replace --presence of a target nucleic acid molecule-- with --presence of the target nucleic acid molecule--.

Also in claim 27, lines 19-24 shall read:

contacting the palladium ions with the device after said contacting the probes with the sample under conditions effective to bind the stannous ions on one or more sites of any of the complex of the target nucleic acid molecules hybridized to the probes; wherein the stannous ions more strongly associate with the target nucleic acid molecule than with the electrical conductors, preventing general and spontaneous deposition of the stannous ions;

Cancel claims 28-31.

In claim 32, line 3, replace --presence of a target nucleic acid molecule-- with --presence of the target nucleic acid molecule--.

Also in claim 32, lines 18-21 shall read:

attaching to the probes and any target nucleic acid molecule metal ions; wherein the metal ions more strongly associate with the target nucleic acid molecule than with

the electrical conductors, preventing general and spontaneous deposition of the metal ions; and

REASONS FOR ALLOWANCE

3. The following is an examiner's statement of reasons for allowance: In view of the amendments, the claimed invention is novel and unobvious over the cited prior art of Richter, Gertner, Fish, Tu and Zocchi. In particular, no prior art was found that teaches or suggests a method for metallizing one or more sites of a nucleic acid molecule or a method for detecting a target molecule in a sample comprising hybridizing the nucleic acid molecule to one or more sets of two oligonucleotide probes that are positioned such that they cannot come into contact with one another. The closest prior art of Fish teaches two or more sets of probes that hybridize to a target nucleic acid molecule, but at least one of the probes is in solution and therefore can contact the bound probe. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Correspondence

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to David C. Thomas whose telephone number is 571-272-
